

# LIVERGUARD

**AI-Driven IoT System for Early Liver  
Disease Detection and Monitoring**

Team :

Abheet Singh  
Rishabh Suri  
Mayank Singh

# PROJECT OVERVIEW

Key components include:

TEMPERATURE  
SENSORS

THERMAL CAMERA

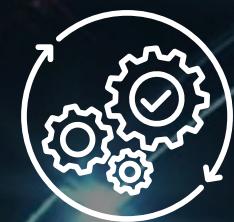

SKIN SENSORS

The project leverages Artificial Intelligence (AI) and the Internet of Things (IoT) to:

Enable continuous remote monitoring

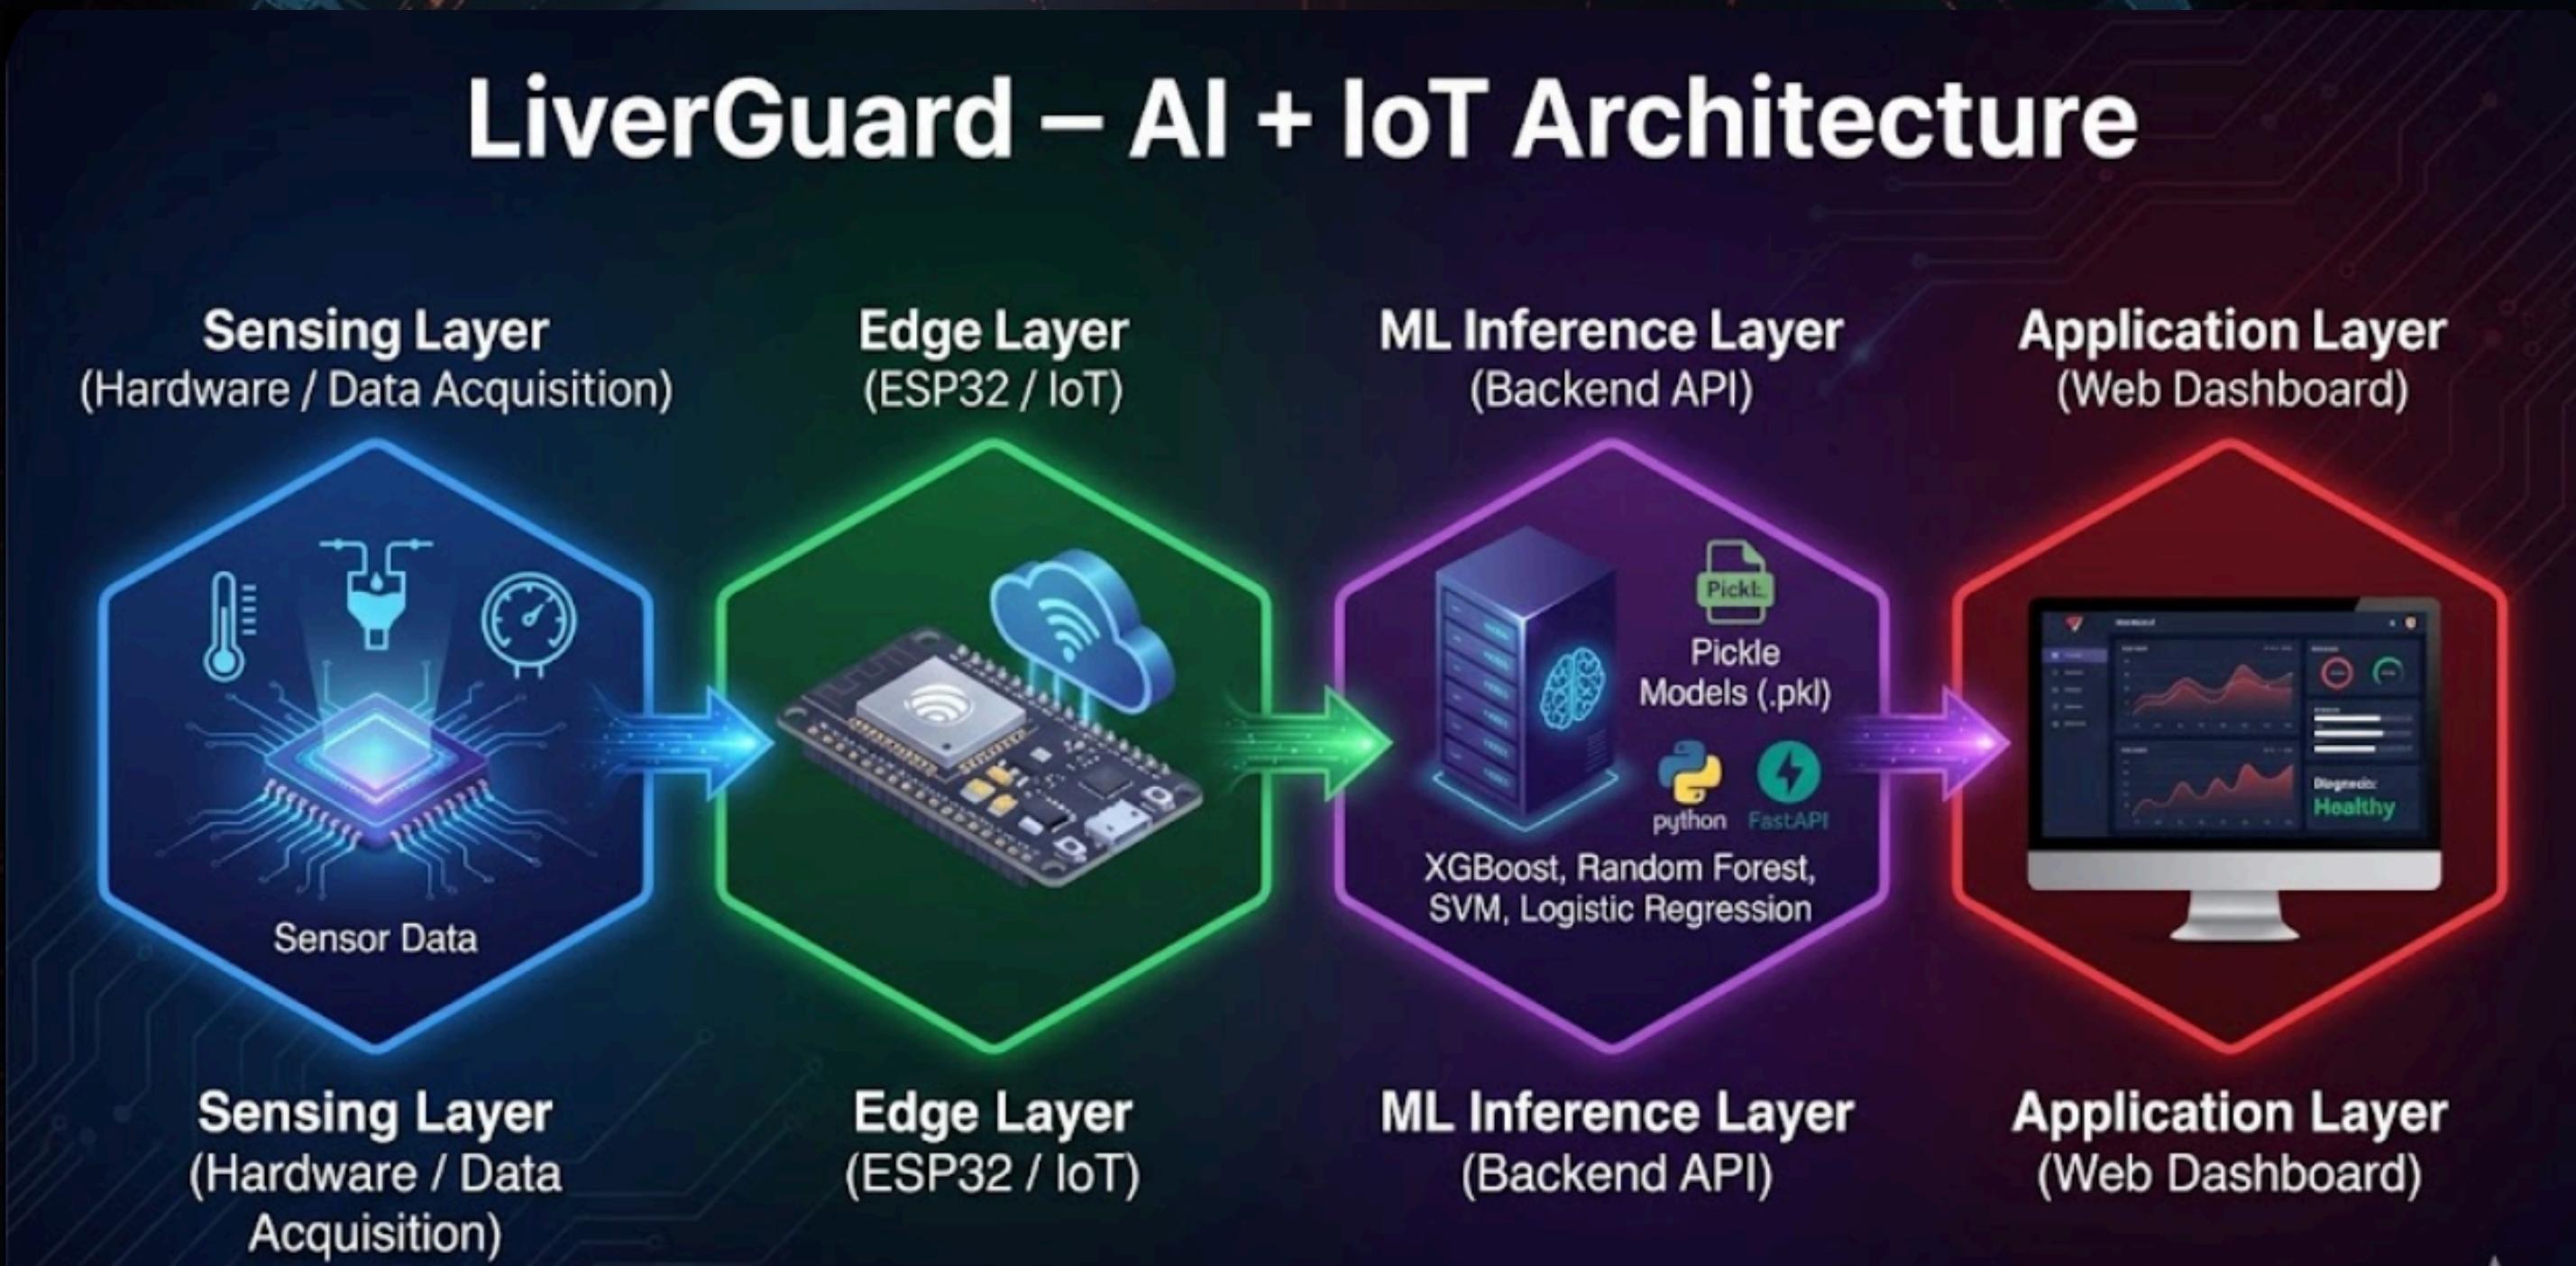

Improve diagnostic accuracy

Support early medical intervention

# ARCHITECTURE

## LiverGuard – AI + IoT Architecture

# PARAMETERS

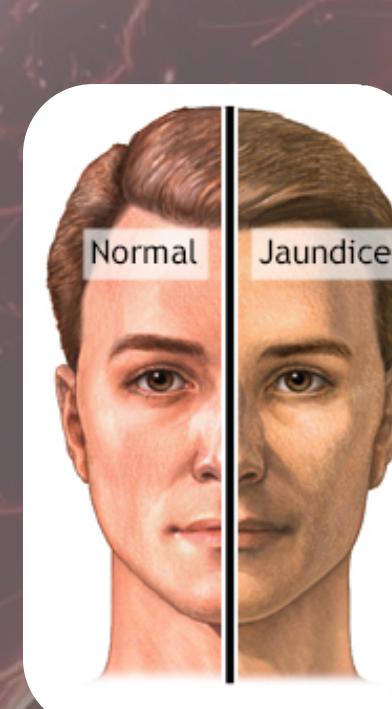

## Skin impedance:

Skin impedance measured by a soft, adhesive on-skin sensor offers a non-invasive way to distinguish between healthy and fatty liver tissues by detecting changes in electrical properties related to fat infiltration.

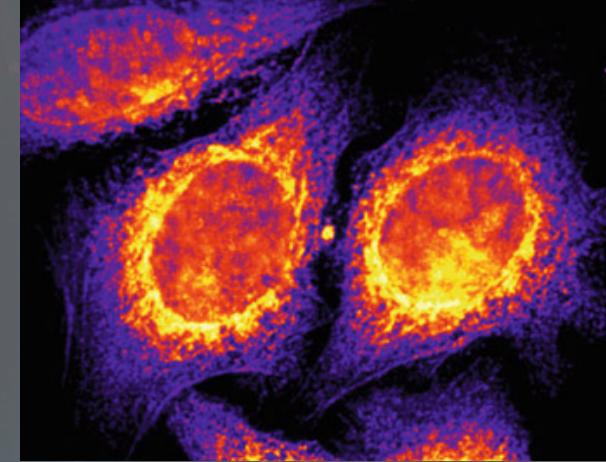

## Skin Colour:

Skin colour measurement provides a rapid, non-invasive method for detecting changes associated with liver disease, especially jaundice and hyperpigmentation.

## Thermal Imaging:

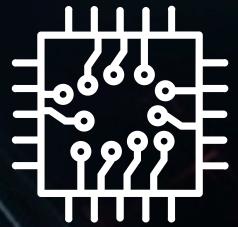

Thermal imaging provides a non-contact approach to detect abnormal temperature patterns on the skin surface, which can signal inflammation or altered blood flow caused by underlying liver dysfunction.

# LITERATURE REVIEW

Parameter	Paper Link	Outcomes
SKIN IMPEDANCE	<a href="https://www.ccjm.org/content/88/4/210">https://www.ccjm.org/content/88/4/210</a>	In this paper the patient was suffering from puffy hands leading to fluid retention which was linked to liver cirrohsis
	<a href="https://PMC9257870/">https://PMC9257870/</a>	This paper shows change in electrolyte levels of patients with different liver diseases
SKIN COLOUR	<a href="https://www.mdpi.com/2673-4532/6/1/6">https://www.mdpi.com/2673-4532/6/1/6</a>	This paper shows links of skin colour with jaundice in new borns
	<a href="https://www.dermatologypaper.com/article/view/83/4-2-5">https://www.dermatologypaper.com/article/view/83/4-2-5</a>	In this reasearch they used the same sensor which is used in our prototype for jaundice detection
THERMAL IMAGING	<a href="https://PMC7511937/#Sec7">https://PMC7511937/#Sec7</a>	Shows links of thermal image with NAFLD
	<a href="https://papers.ssrn.com/sol3/papers.cfm?abstract_id=5244427">https://papers.ssrn.com/sol3/papers.cfm?abstract_id=5244427</a>	Blue light emission trends with bilurubin

# HARDWARE USED

## Important Sensors

Color Sensor  
RGB Module

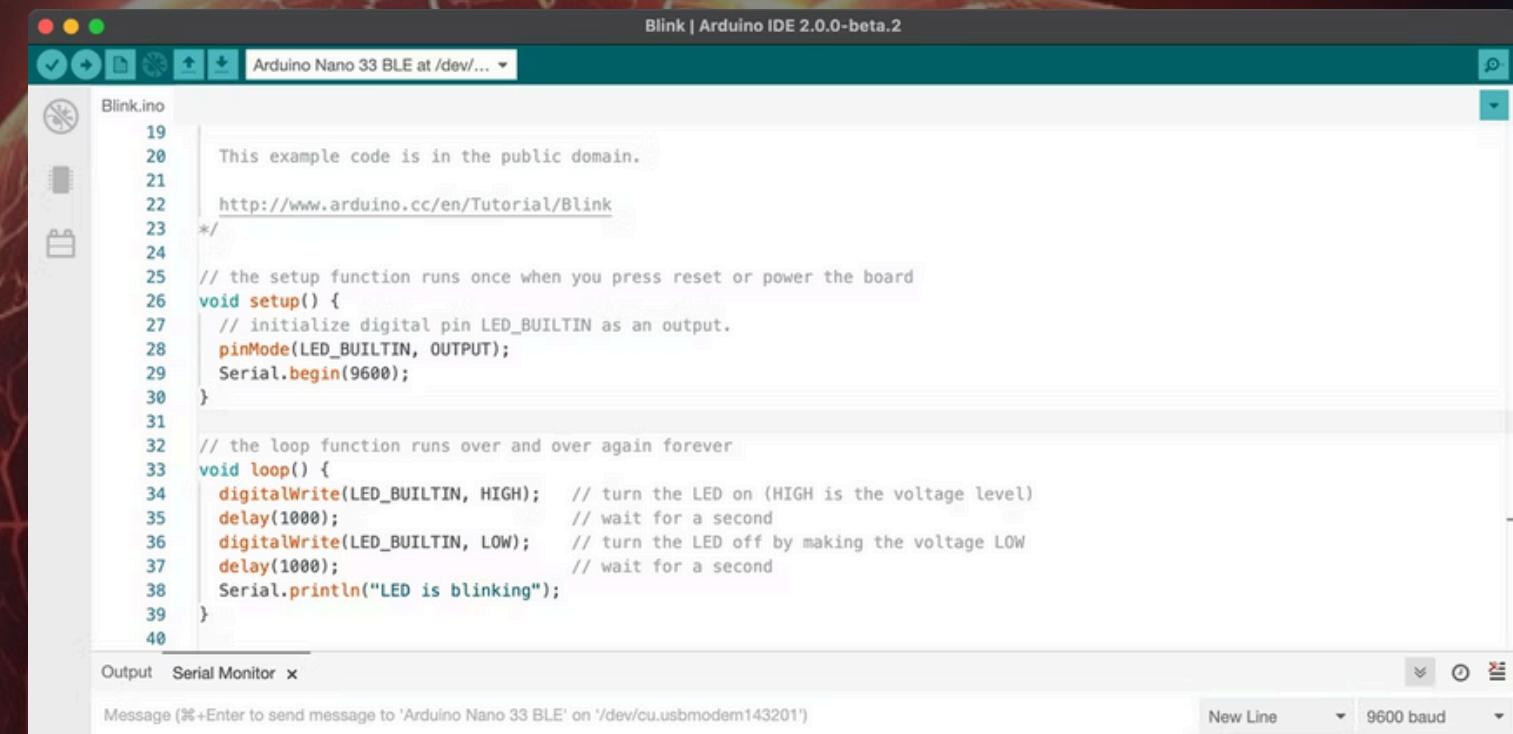

IR Array Thermal  
Imaging Camera

Galvanic Skin  
Response Module  
Current Sensor Kit

## IDE AND MICROCONTROLLER USED

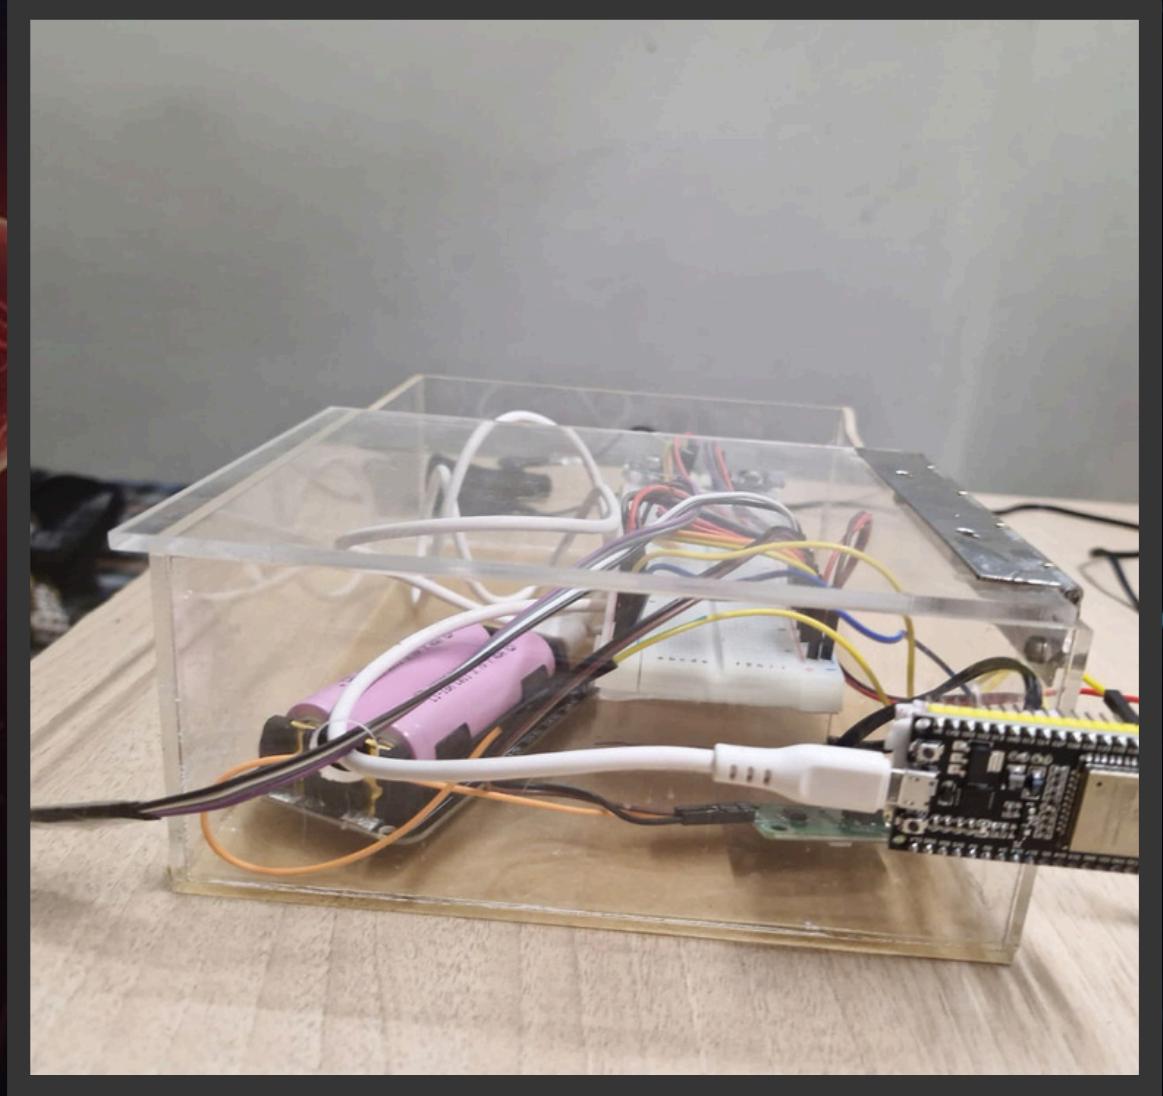

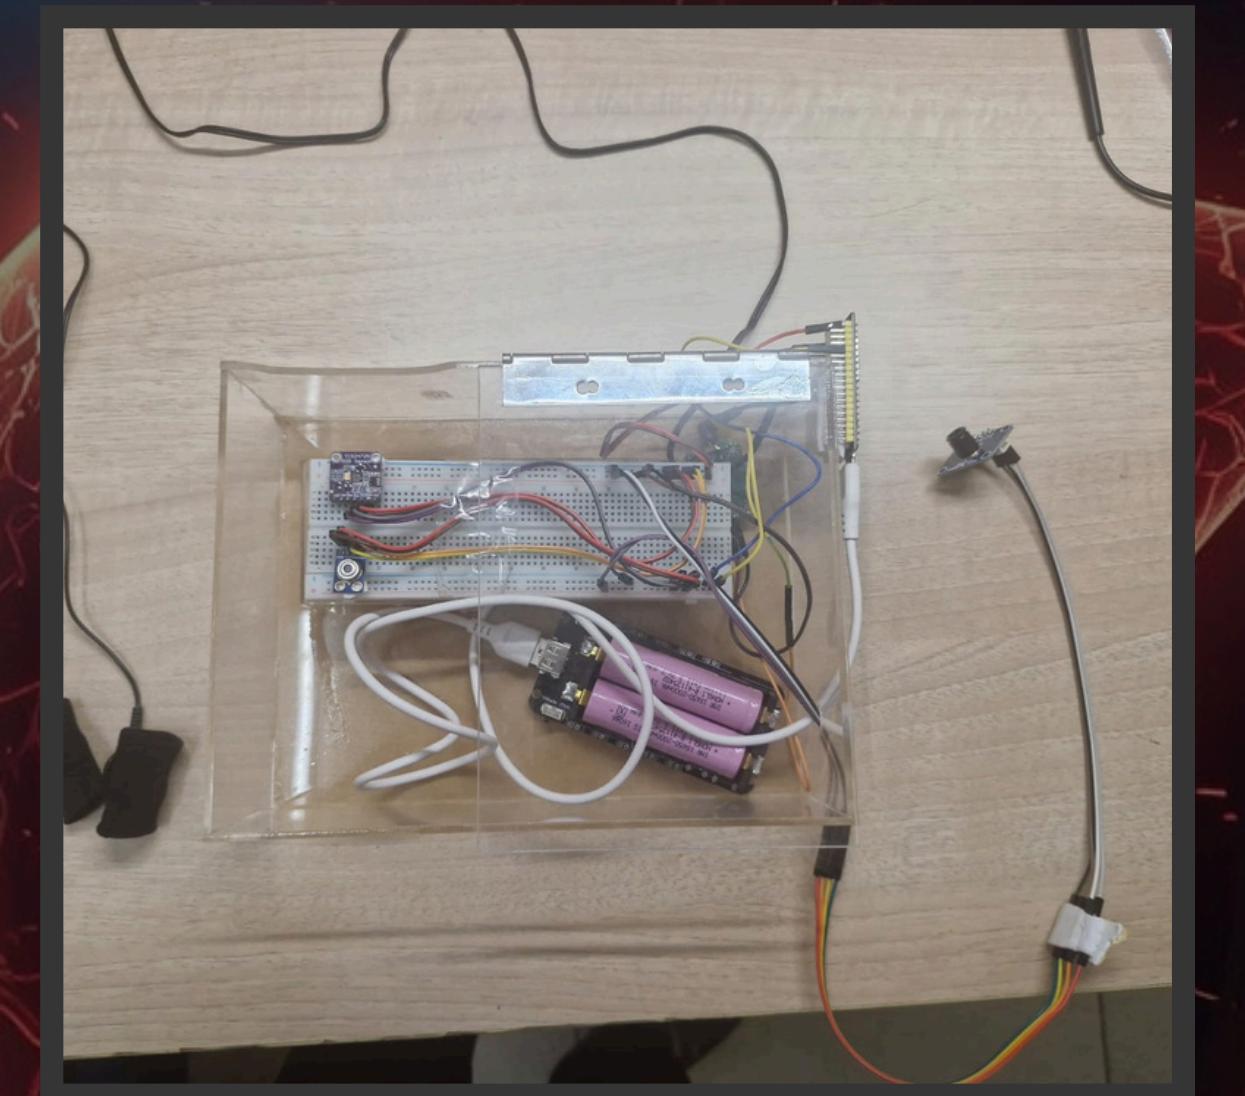

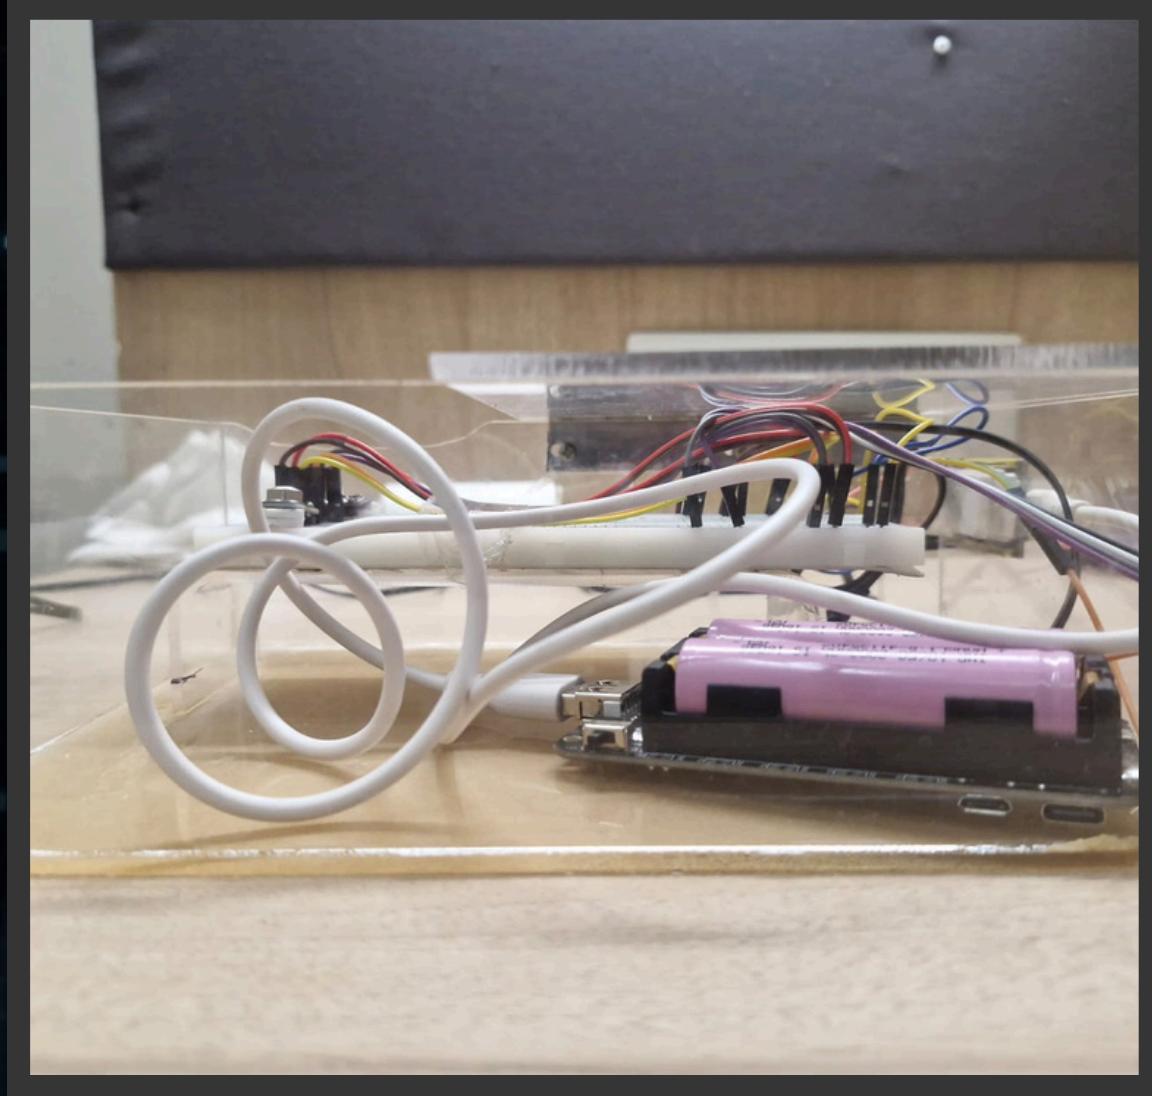

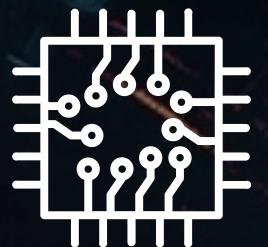

## ESP32

- Powerful microcontroller with WiFi/Bluetooth
- Connects to multiple sensor

## Arduino IDE:

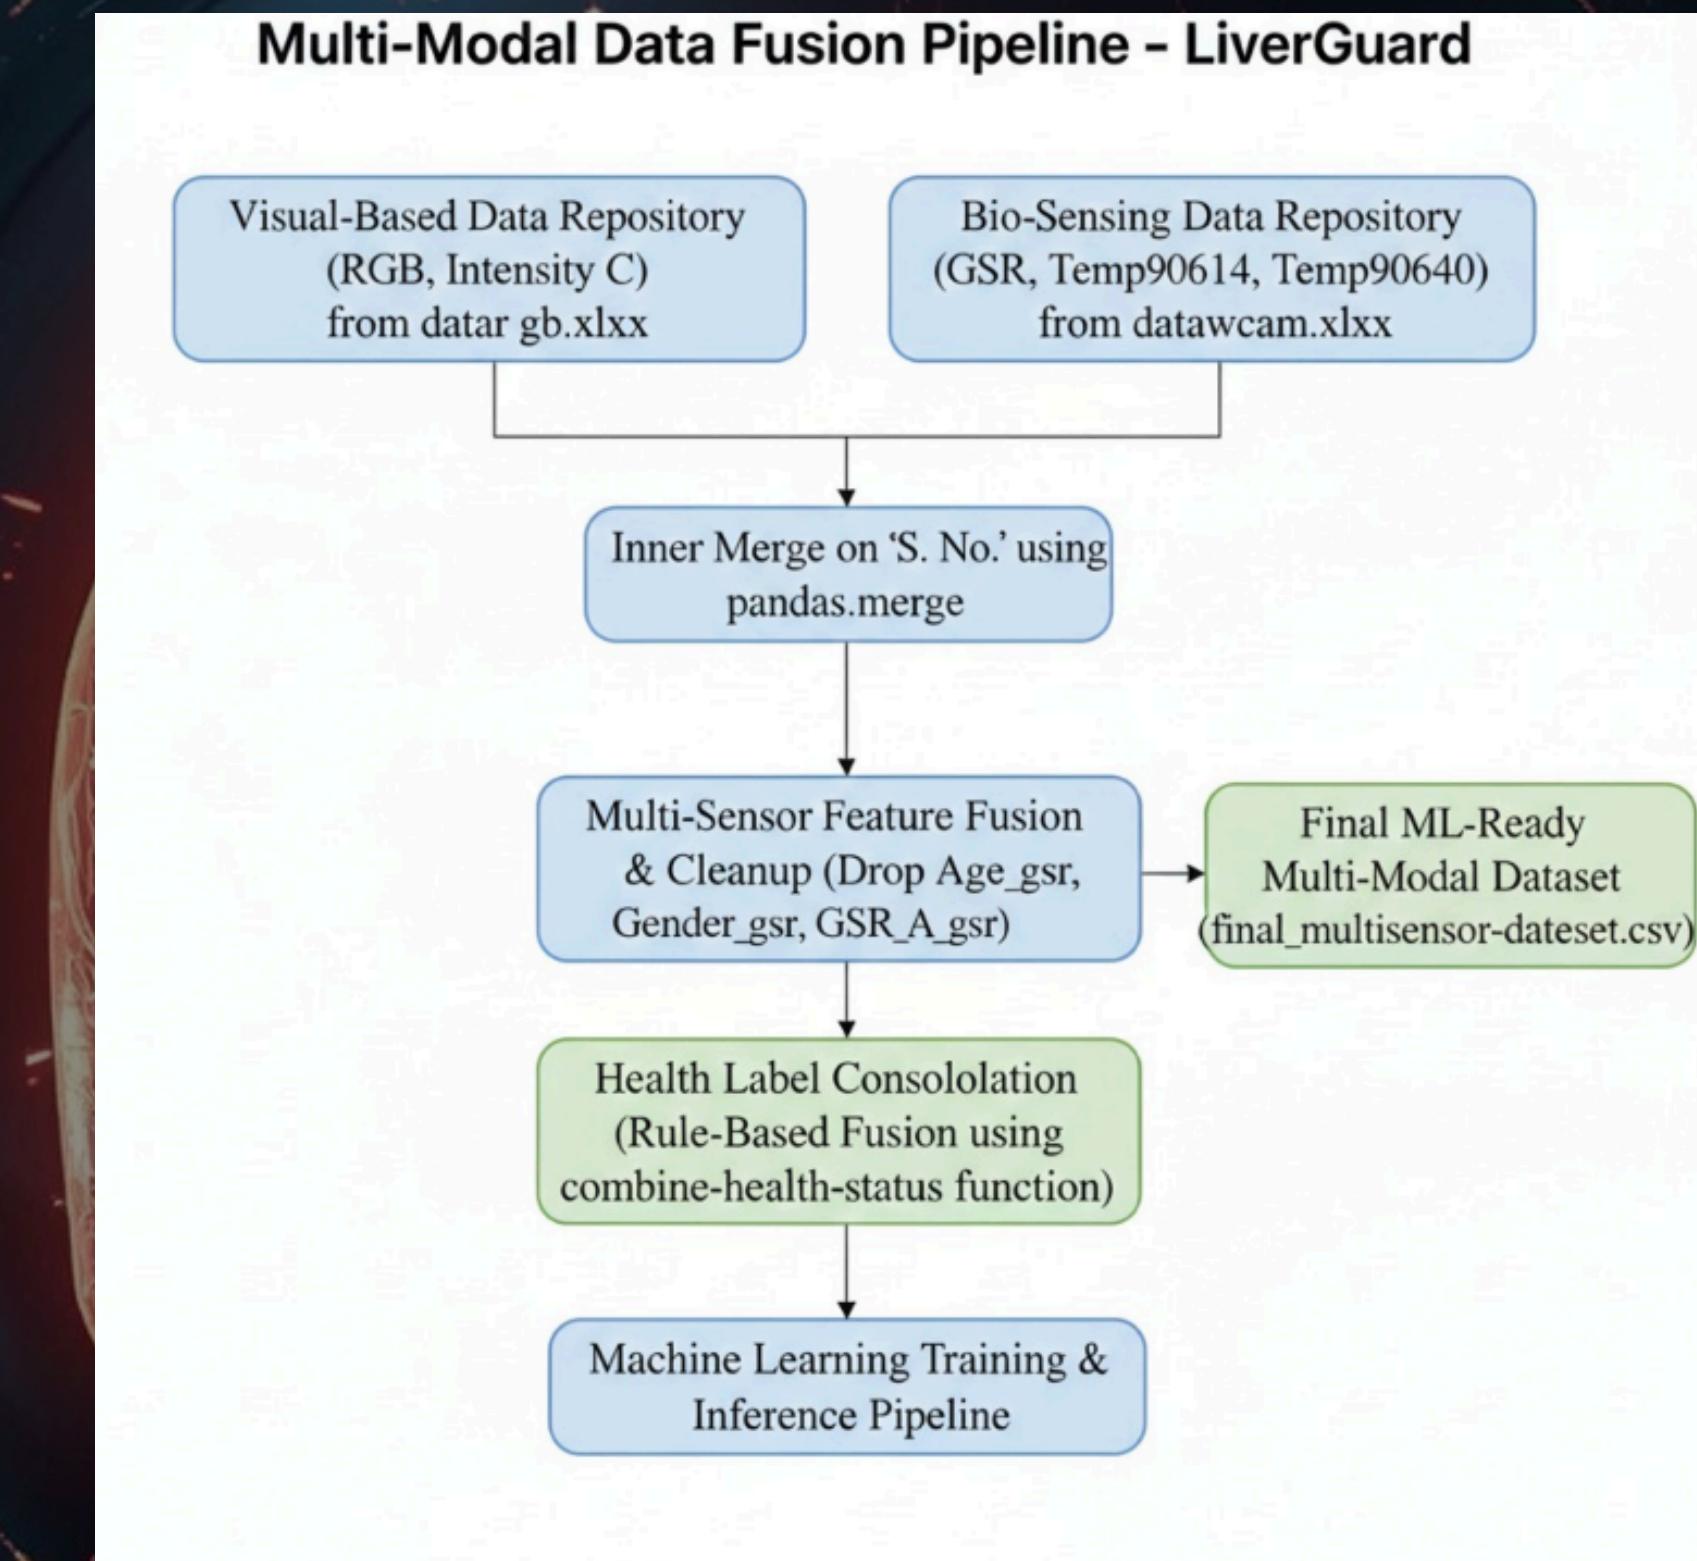

- Easy platform for coding and uploading to microcontrollers
- Supports many sensors and libraries
- Widely used and beginner-friendly

# HARDWARE

*The final product has been fabricated using acrylic sheets and laser cutting technology, and includes a movable closing flap that helps maintain uninterrupted connections.*

# DATA COLLECTION

# WEBPAGE

## DASHBOARD

### Live Detection

**Enter Patient Data**

Age: 25 - +

Gender: Male

Height (cm): 170 - +

Weight (kg): 70 - +

Run Detection

**Detection Results**

- Device Online
- Prediction complete
- Risk Level: Medium

Confidence: 64%

**Individual Model Decisions**

Voting → High

Stacked → High

# WEBPAGE

## ANALYTICS

Advanced Analytics 

Select Analytics View

Sensor Performance

Individual Sensor Accuracy

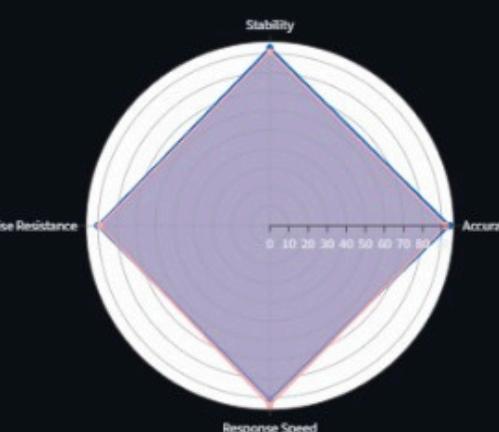

GSR Sensor  
91%  
↑ +2%

Thermal Sensor  
94%  
↑ +1.5%

RGB / Yellowness  
92%  
↑ +2.3%

Multi-sensor fusion improves robustness. If one sensor becomes noisy, ensemble models maintain stability.

Reliability Radar

Legend: GSR, Therm, RGB

# WEBPAGE

PSUEDO DOCTOR

**AI Clinical Decision Support**

Care Pathway Diagnostics Treatment Strategy Lifestyle Plan Medical Support Prognosis

**⚠ Physician guided management**

Recommended timeline: Within 4-8 weeks

**Clinical focus**

- Detect reversible fatty infiltration
- Prevent inflammatory cascade
- Improve insulin sensitivity

**Monitoring frequency**

- Repeat evaluation every 6-12 months

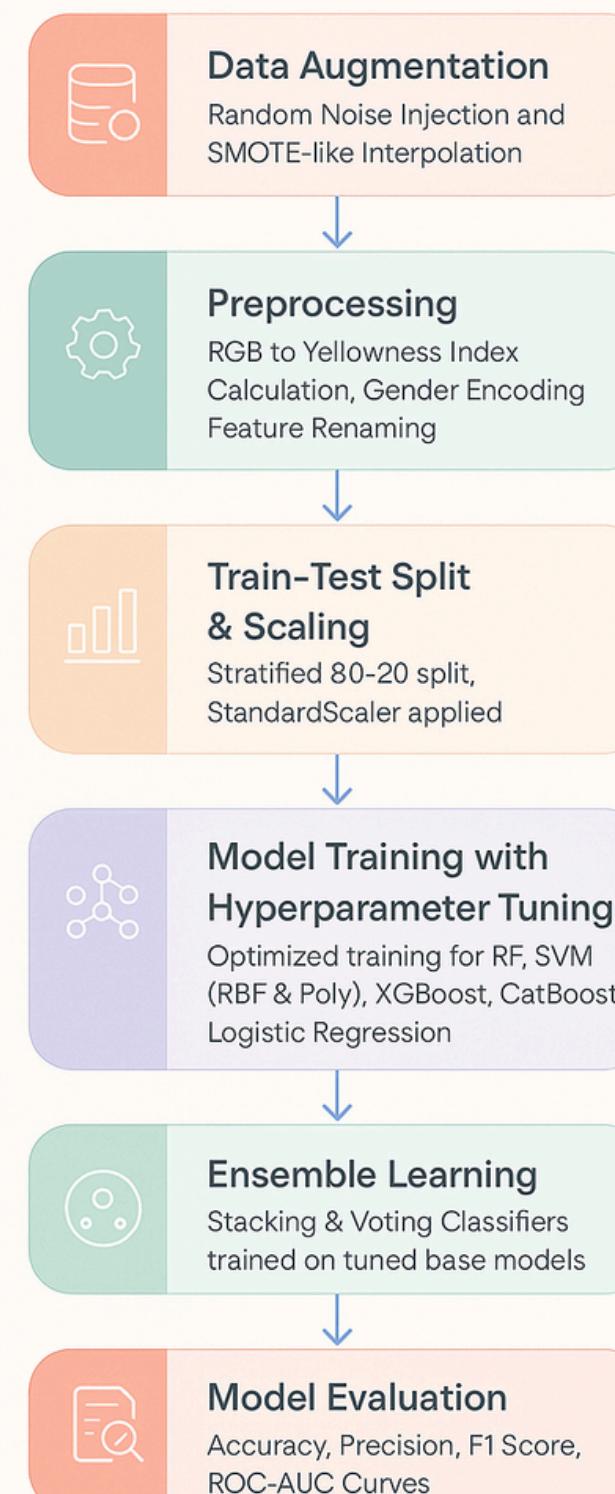

> Sensor Data Used

# ML ARCHITECTURE

## AI Architecture for LiverGuard

Liver Disease Detection System

### 1. Data Augmentation :

Random noise injection and SMOTE interpolation

### 2. Data preprocessing :

Skin yellowness index calculation using RGB values and encoding categorical variables

### 3. Model Training :

Training base layer models (RF, SVM, LR, XGB and CatB) with hyperparameter tuning

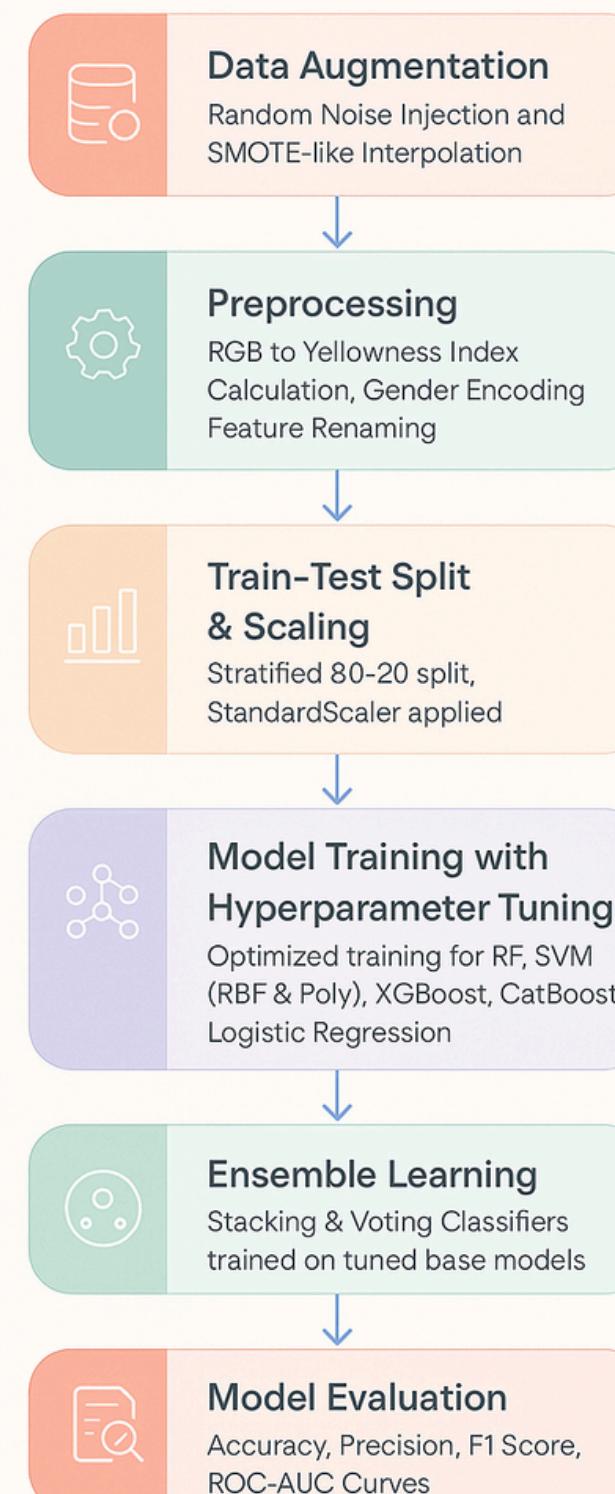

### 4. Ensemble Learning :

Stacking and soft voting on trained models

# ML ARCHITECTURE

## AI Architecture for LiverGuard

Liver Disease Detection System

## 5. Model evaluation :

Calculating Accuracy, Precision, F1, ROC-AUC

## 6. Explainability :

Feature importance graphs

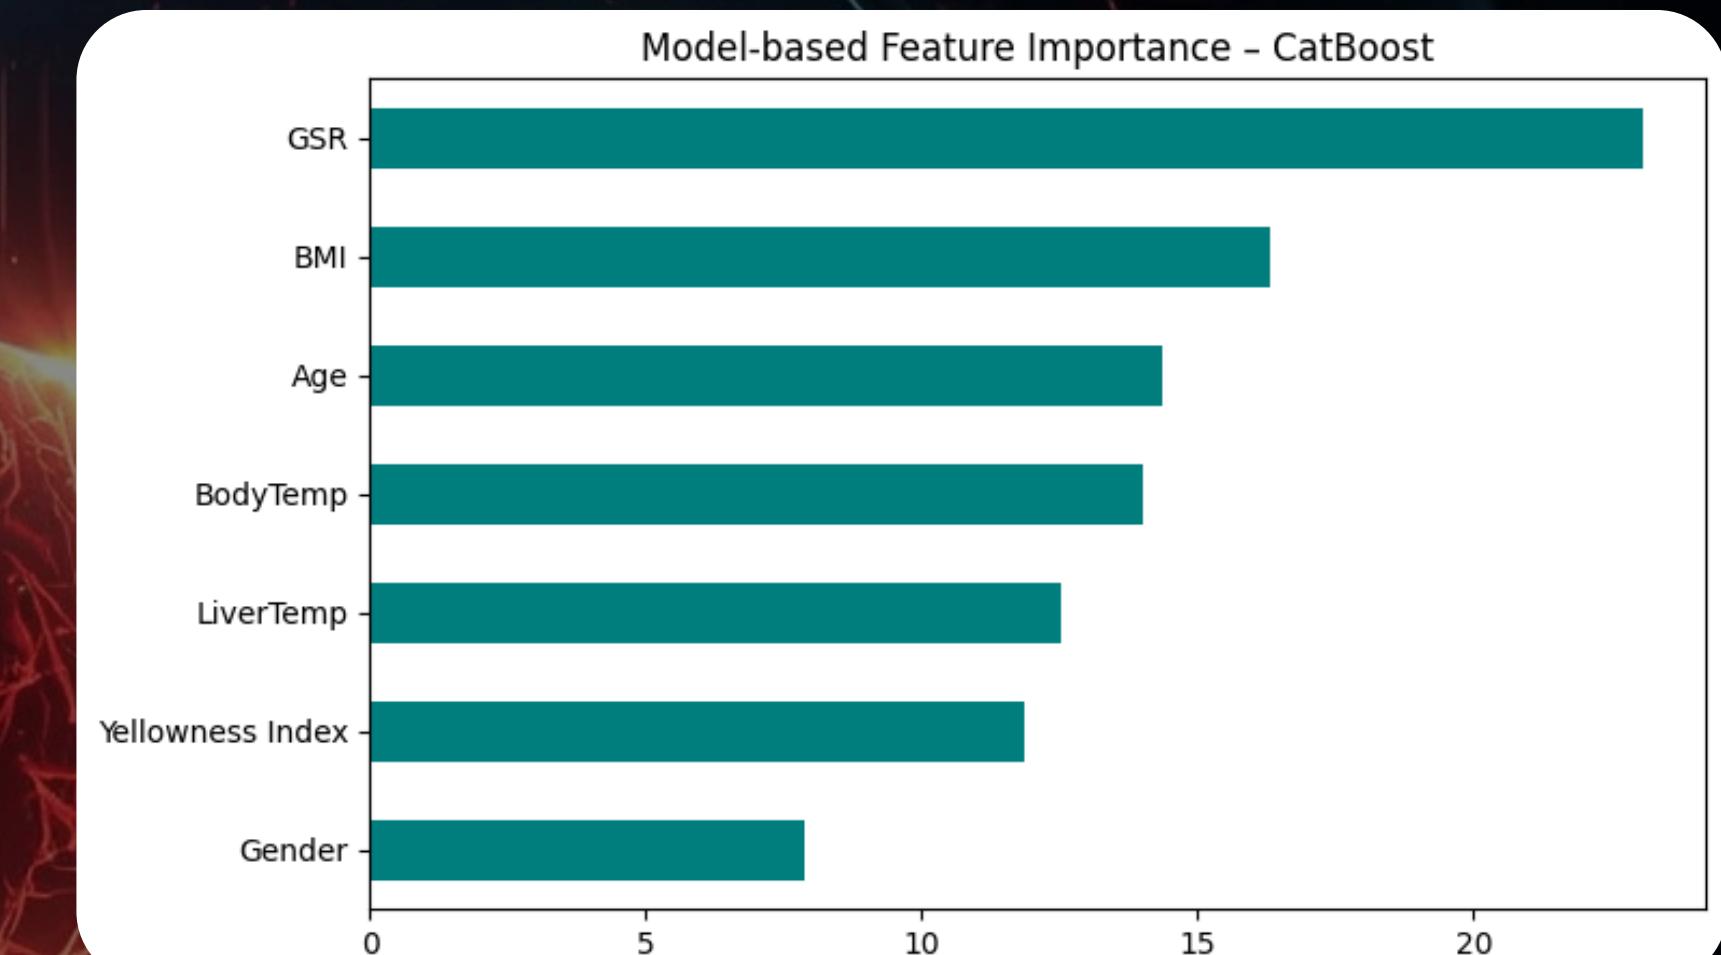

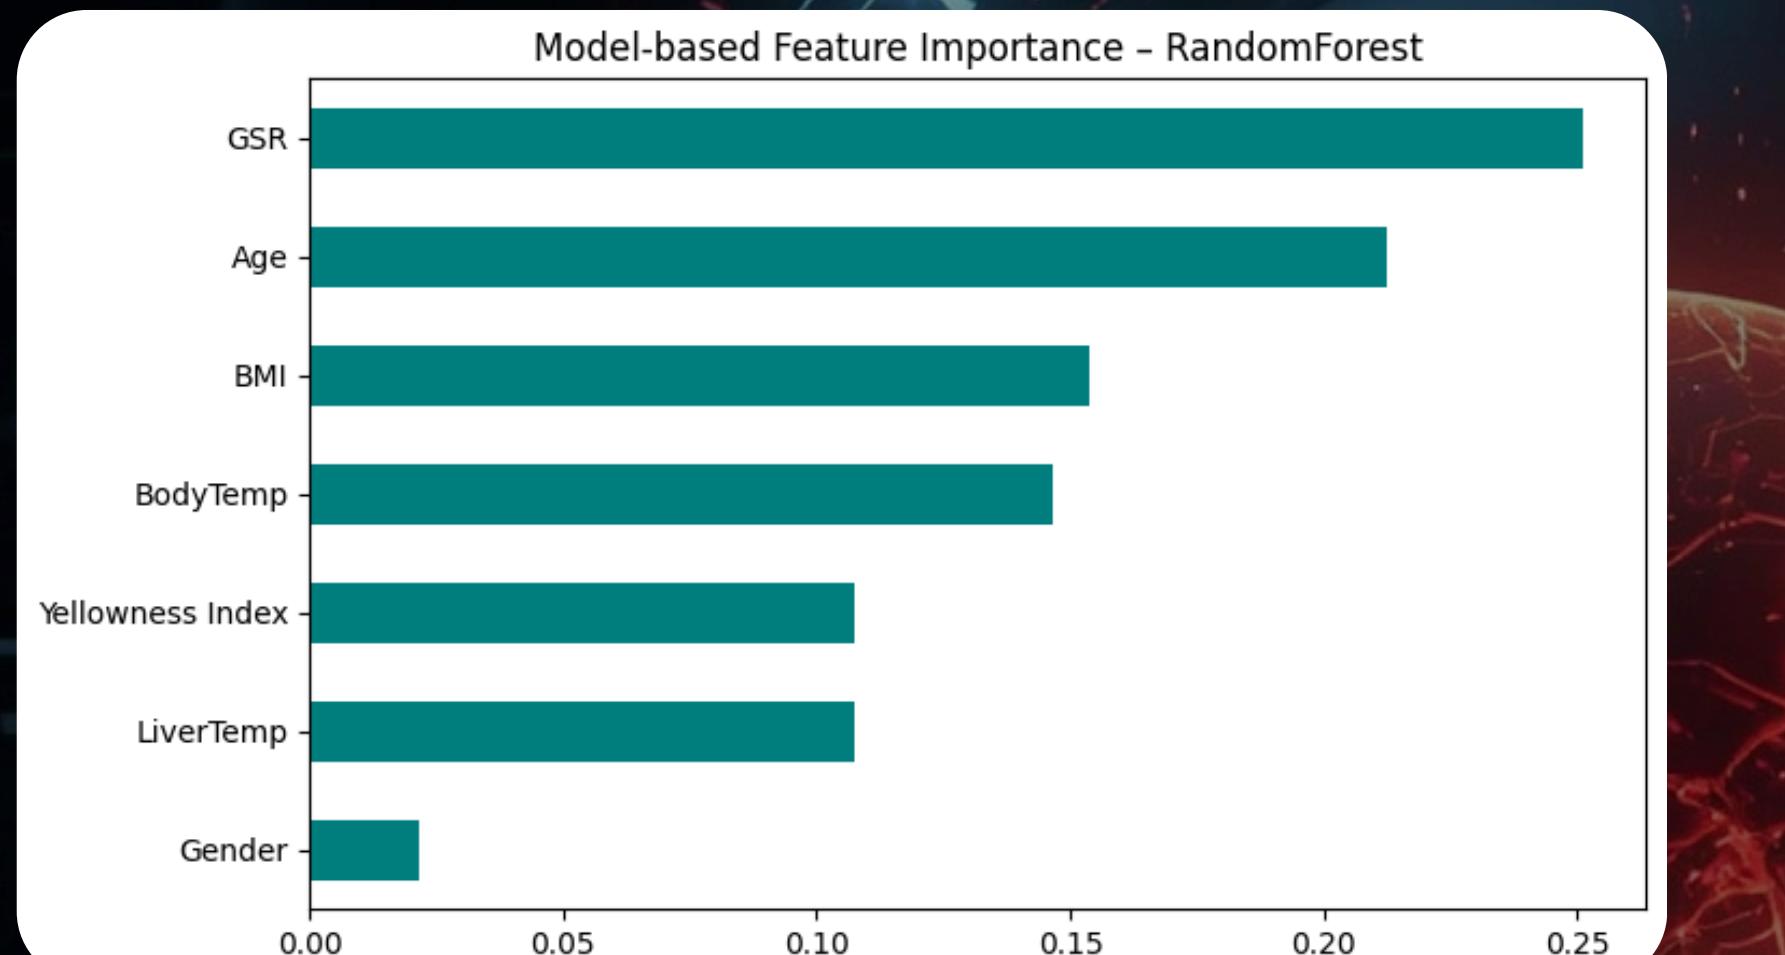

## 7. On-time inference :

User input → Preprocess → Predict :  
Healthy / Unhealthy

## 8. Model dumping :

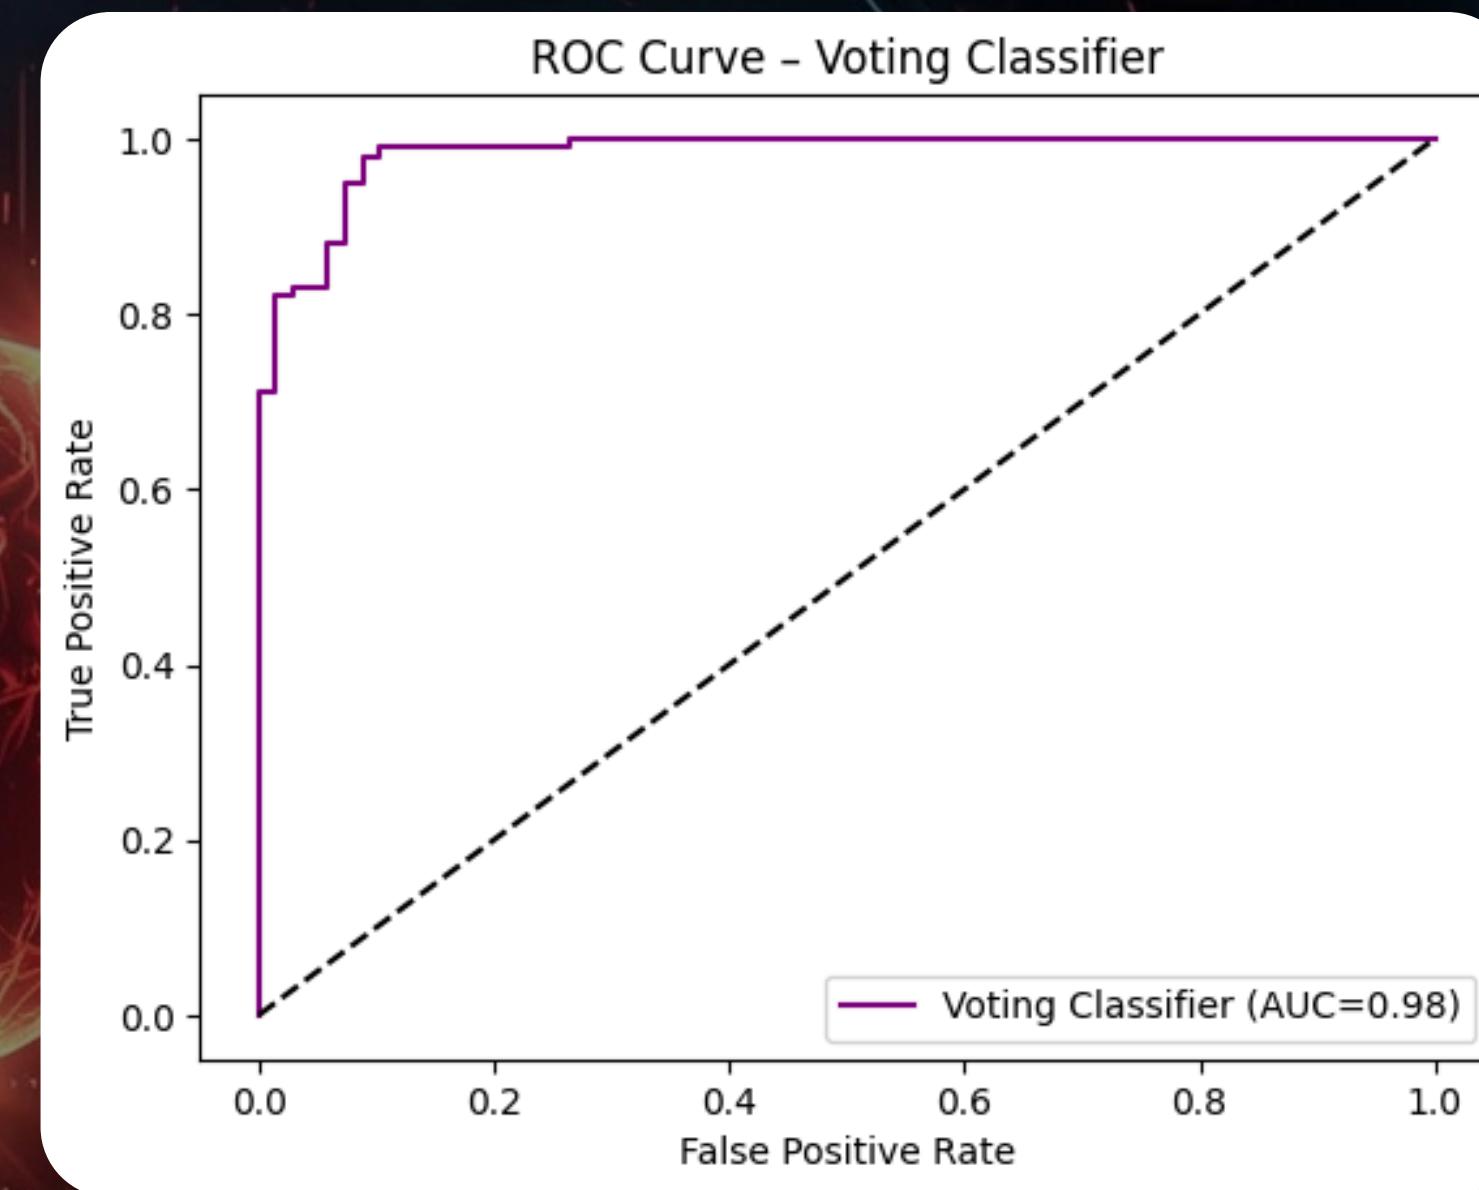

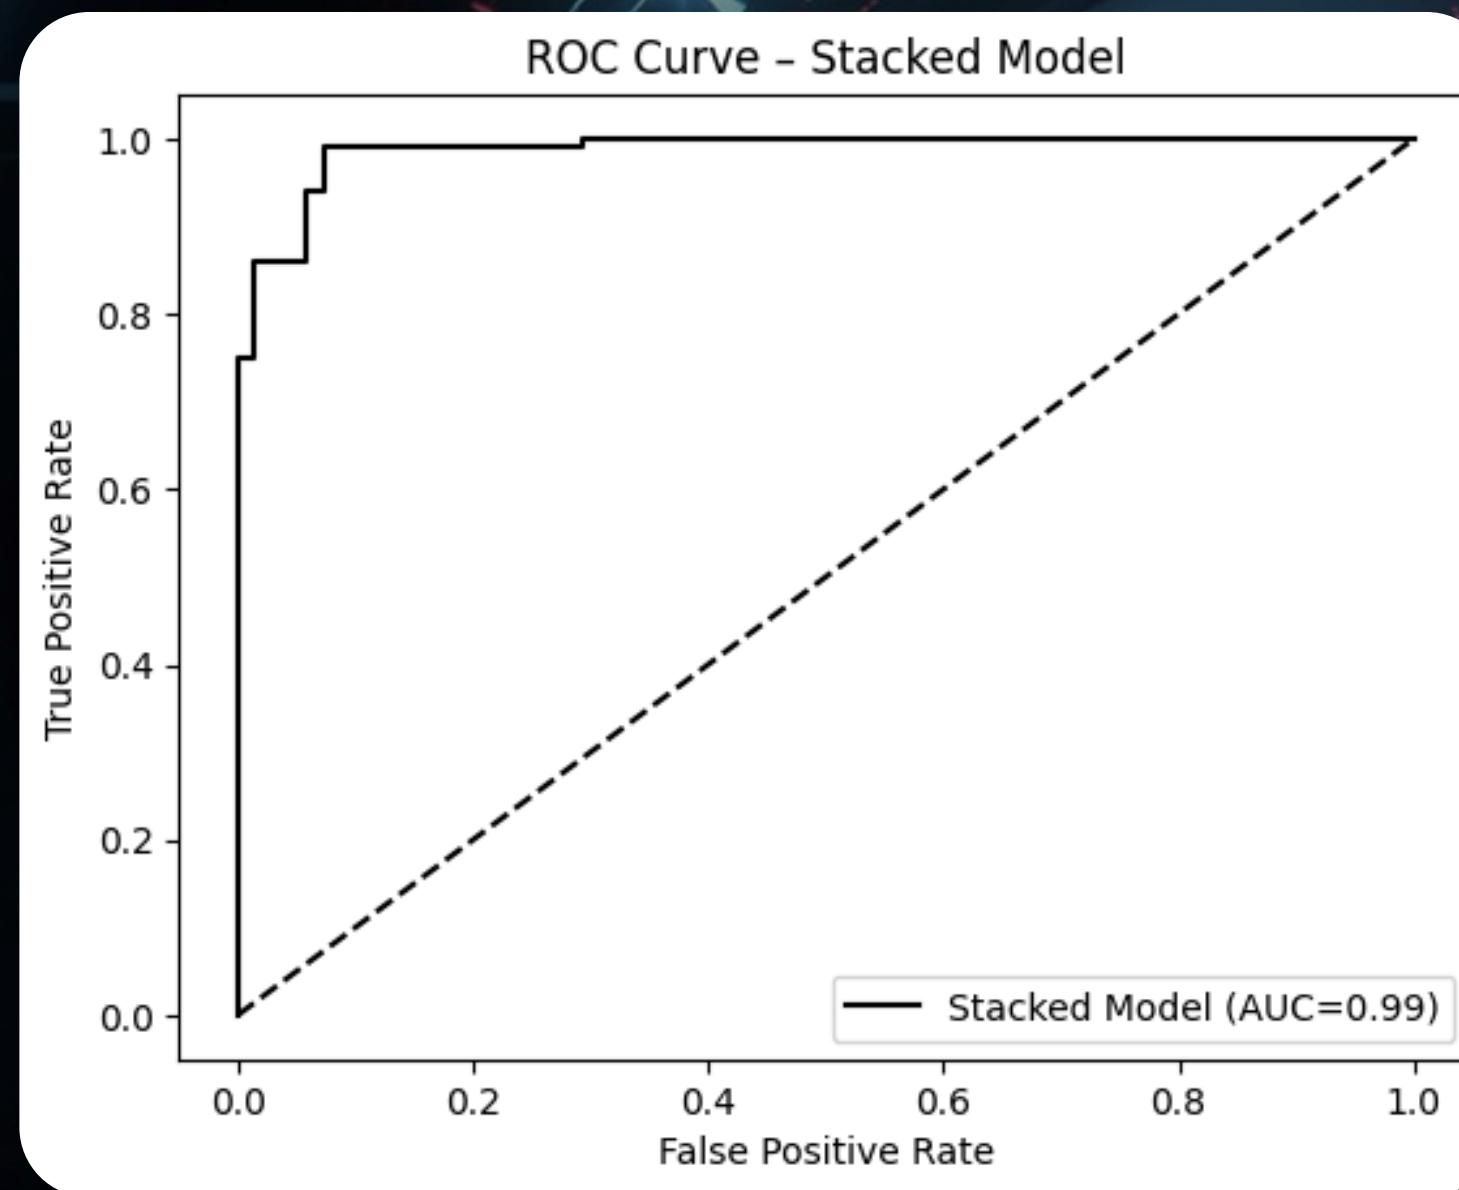

Exporting stacking and soft voting models as pickle files

# FEATURE IMPORTANCE

- 1. GSR value is the top predictor of liver health.
- 2. Age, BMI, and Body Temperature are strong secondary indicators.
- 3. Gender affects liver health the least.

# RESULTS

**Accuracy : 95%**  
**ROC-AUC Score : 0.987**  
**F1 Score : 0.93 (Unhealthy) and 0.96 (Healthy)**  
**Precision : 0.94 (Unhealthy) and 0.95 (Healthy)**

**Accuracy : 95%**  
**ROC-AUC Score : 0.983**  
**F1 Score : 0.94 (Unhealthy) and 0.96 (Healthy)**  
**Precision : 0.98 (Unhealthy) and 0.93 (Healthy)**
